IDENTIFIERS	*South Carolina

ABSTRACT

Membership projections, which are calculated using average daily membership in conjunction with cohort survival procedure, are produced annually in South Carolina to give insight into trends within the state and individual school districts. By the 1998-99 school year, average daily membership for kindergarten through grade 12 in South Carolina public schools is projected to reach 660,900, an increase of about 32,800 (5.2%) over the 1992-93 level. From 1988-89 to 1992-93, the average increase has been about 3,800 students per year. Increases are expected at the elementary and high school levels, with a leveling off in the middle schools during the next 6 years. It is expected that the membership of 58 districts will increase and that of 33 will decline. Data also indicate that the percent of school completers entering college increased from about 44% in 1982 to 55% in 1992. (Contains 7 figures, 13 tables, and 9 references.) (SLD)

HIGHLIGHTS

- By the 1998-99 school year, average daily membership for kindergarten through grade 12 in South Carolina public schools is projected to reach 660,900, an increase of about 32,800 (5.2%) over the 1992-93 level, an average increase of about 5,500 pupils per year.

- The average increase in K-12 public school membership from 1988-89 to 1992-93 was about 3,800 pupils per year.

- Projected 6-year changes in K-12 public school membership for certain grade combinations:

  K-6 will increase about 2,400 pupils per year after 1992-93;
  7-8 will level off to about 104,000 pupils after 1992-93;
  9-12 will increase from about 169,000 pupils in 1992-93 to over 185,000 pupils in 1998-99.

- Projected changes in membership for the individual districts from 1992-93 to 1998-99:

  58 districts will increase;
  33 districts will decline.

- Beaufort County School District is projected to increase 24.1 percent from 1992-93 to 1998-99, the highest percent increase in the state.

- Charleston County School District is projected to increase between 1992-93 and 1998-99 by 3,266 pupils, the highest number within the state.

- The percent of eighth graders completing high school four years later has been about 70 percent for the past ten years.

- The percent of completers entering college increased from about 44 percent in 1982 to 55 percent in 1992.

COVER NOTE: The cover map indicates the four school districts where membership is projected to increase by at least ten percent and by more than 2,000 students over the next six years.

District	Percent Increase	Membership 1992-93 to 1998-99
Beaufort	24.1	13,267 - 16,470
Richland 2	22.7	13,322 - 16,350
Lexington 1	18.3	12,050 - 14,260
Aiken	11.1	24,663 - 27,400

INTRODUCTION

By the 1998-99 school year, average daily membership for kindergarten through grade 12 in South Carolina public schools is projected to reach 660,900, an increase of about 32,800 pupils (5.2%) over the 1992-93 level. The projected membership from 1992-93 to 1998-99 shows an average growth of about 5,500 pupils per year. The average annual increase from 1988-89 to 1992-93 was about 3,800 pupils, ranging from an increase of 309 (1988-89 to 1989-90) to an increase of 5,438 (1990-91 to 1991-92). The projected increase in membership is attributed to a rising birth rate and more pupils moving into the state than out of the state.

Membership projections, which are calculated using average daily membership in conjunction with the cohort-survival procedure, are produced annually to give insight into trends within the state and within individual school districts. Various charts and tables are presented to facilitate educational planning. Act 164 of 1993 changed the date by which a child must attain a certain age to enter school from November 1 to September 1. That change decreased the projected kindergarten membership by approximately 7,000 pupils in 1995-96. The class of approximately 7,000 fewer pupils will move through the grade levels during the next twelve years. The effect of Act 164 of 1993 on membership will more or less move out of the system with the senior class of 2008.

Changes that result from future legislation or economic developments could alter the figures presented in this document. For example, the opening of the BMW plant in the Spartanburg area might result in student counts higher than projected. Conversely, the closing of the Naval facility in the Charleston area could result in student counts lower than projected.

Membership projections for individual districts are rounded to tens while the state projections are rounded to hundreds. Due to this rounding procedure, the sum of projections by grade may not equal the district total, and the sum of the district totals may differ slightly from the state totals.

This edition includes a table which tracks the movement of pupils at selected intervals from birth through college entrance. The groups enumerated at these selected intervals contain different individuals due to migration, deaths, failures, etc. Only statewide figures are presented in this table. County figures can be obtained from Education Information Services, 1429 Senate Street, Columbia, SC 29201, or by phoning (803) 734-8262.

All state totals in this publication exclude South Carolina Department of Juvenile Justice, Palmetto Unified, Felton Laboratory School, and South Carolina School for the Deaf and Blind.

Caution should be exercised by all users of the projections contained in this publication because of their dependence on certain ratios remaining constant. All projections are updated each year as membership data are received and compiled by the State Department of Education.

PROJECTED TRENDS

Public School Membership Projections

Total membership for grades K-12 in South Carolina public schools will increase from 1992-93 to 1998-99. Membership increased an average of 3,800 pupils per year from 1988-89 to 1992-93. An average annual growth of about 5,500 pupils is projected for the six-year period from 1992-93 to 1998-99. (See Figure 7 on page 6).

Membership in K-6 will increase after 1992-93 at an average rate of about 2,400 pupils per year. (See Figure 4 on page 5). The K-6 membership will decrease 2,600 between 1994-95 and 1995-96. The decrease is due to Act 164 of 1993, which moved forward two months the required entrance age for kindergarten pupils. Membership in K-6 will increase by 5,000 the following year.

Membership in grades 7-8 has been increasing since 1988-89 and is projected to increase to about 104,000 in 1993-94. The grade 7-8 membership is expected to remain relatively flat between 1993-94 and 1998-99. (See Figure 5 on page 5).

The sharp decline in membership in grades 9-12 which began after school year 1986-87 reversed direction in 1991-92. Membership in grades 9-12 is projected to increase each year through 1998-99. (See Figure 6 on page 6).

Of the 91 school districts, 10 (11.0%) are projected to have declining memberships each year between 1992-93 and 1998-99. In addition, 23 districts (25.3%) are projected to show an overall decline in membership over this time period, although not every year.

Twenty-six school districts (28.6%) are projected to have consistently increasing memberships from 1992-93 to 1998-99. Thirty-two districts (35.2%) are projected to show increases in membership over this time period, but not for every year during the interim.

FIGURE 1

SOUTH CAROLINA SCHOOL DISTRICTS

Projected Membership Change

1992–93 to 1998–99

Percent Change

+10.0% to +24.1%
+5.0% to +9.9%
0.0% to +4.9%
-4.9% to -0.1%
-30.0% to -5.0%

The South Carolina map on the opposite page identifies thirteen school districts which are projected to have a net increase in membership of at least ten percent from 1992-93 to 1998-99. Additionally, twenty districts are projected to increase at least five percent but less than ten percent by 1998-99. Seventeen school districts are projected to decrease at least five percent by 1998-99. The remaining forty-one districts are projected to increase or decrease less than five percent during the time span.

Of the thirteen school districts projected to have increases in membership of at least ten percent from 1992-93 to 1998-99, the following four districts will increase by more than 2,000 pupils:

DISTRICT	PERCENT INCREASE	MEMBERSHIP 1992-93 to 1998-99
Beaufort	24.1	13,267 - 16,470
Richland 2	22.7	13,322 - 16,350
Lexington 1	18.3	12,050 - 14,260
Aiken	11.1	24,663 - 27,400

Beaufort School District, with an increase of 3,203 pupils, is projected to have the highest percent increase (24.1%) of any school district between 1992-93 and 1998-99. Charleston's increase of 3,266 pupils between 1992-93 and 1998-99 is the highest projected increase in the state. Darlington County School District is projected to decrease by 688 pupils, the largest decrease in any district between 1992-93 and 1998-99. Florence 2 is projected to lose 364 pupils (30.0%), the largest percent decrease of any district.

Private School Membership Projections

Due to the instability over the years of private school membership in various counties, future membership at the county or grade level has been difficult to estimate closely. At the State level, however, private school membership decreased from 1988-89 to 1992-93. Private school membership for 1993-94 through 1998-99 is assumed to be constant at the reported membership in 1992-93. (See Figure 3 on page 4).

[b] The sum of the figures by grade may not equal the total due to rounding.

PROCEDURES USED FOR MEMBERSHIP PROJECTIONS

PUBLIC SCHOOL MEMBERSHIP

COHORT-SURVIVAL PROCEDURE

The procedure currently used for projecting public school membership for grades 2-12 in South Carolina school districts is referred to as the cohort-survival procedure. This procedure is probably the most widely used for making short-range membership projections. The procedure currently does not utilize kindergarten membership. Kindergarten projections are explained later in this section.

The data requirements for implementation of the cohort-survival procedure are: 1) projected first grade membership for each year of the projection period and 2) a matrix of grade-to-grade survival ratios. The projection period is the range of years for which membership is to be projected. A survival ratio is the quotient obtained by dividing the membership of one grade for a school year into the membership of the next higher grade a year later. The survival ratios are different for each school district and for each grade level. However, the survival ratios for a given grade level and district tend to remain relatively constant from year to year.

There are some cases, however, in which the survival ratios change dramatically from one year to the next. For example, a small school district could experience a large percent change in membership due to the opening or closing of an industrial plant within the district. Legislative decisions also could affect membership in some districts. Generally, the survival ratios are close to 1.0. A survival ratio less than 1.0 indicates the net effects of pupils moving out of the district, deaths, nonpromotions, dropouts, and transfers to private schools. A survival ratio greater than one indicates the net effects of pupils moving into the district, promotions, and transfers from private schools.

For the state of South Carolina (all districts combined), the grade-to-grade survival ratios were less than one or greater than one as follows:

Less Than One	Greater Than One
1 to 2	2 to 3
7 to 8	3 to 4
9 to 10	4 to 5
10 to 11	5 to 6
11 to 12	6 to 7
	8 to 9

MATRIX OF SURVIVAL RATIOS BY GRADE AND BY DISTRICT FOR PUBLIC SCHOOLS

The matrix of survival ratios was computed by dividing the membership of grades 1-11 into the membership of grades 2-12 of the succeeding year. An average was computed from five years of data.

PUBLIC FIRST GRADE MEMBERSHIP PROJECTIONS

The matrix of survival ratios is used to project the membership for grades 2-12 based on the membership for grades 1-11 of the preceding year. The matrix does not, however, project the membership for the first grade. The first grade membership projections were based on: 1) the number of county births six years prior to the projection year, and 2) the ratio obtained by dividing the most recent first grade membership for the county by the number of county births six years earlier. Details of the procedure are contained in a paper entitled *Working Notes: Statistical Procedures for Membership Projections, 1994 through 1999.*

Approximately one-half of the projected school membership for 1998-99 (grades 1-6) is determined by the projected first grade membership. The first grade cohort of 1993-94 will progress to the sixth grade of 1998-99. Caution

should be exercised in using projected memberships as forecasts, particularly those which are dependent upon the first grade projections. Some factors which may cause projected memberships to differ substantially from actual first grade memberships are: 1) the six-year time span between births and first grade membership, 2) migration of population, and 3) the method of allocating county births to districts within the county.

After having obtained the projected first grade membership figures and the matrix of survival ratios, the data requirements for projecting the membership for grades 2-12 were satisfied. The survival ratios were applied consecutively to obtain the projected memberships by grade for each school district from 1993-94 through 1998-99.

PUBLIC KINDERGARTEN MEMBERSHIP PROJECTIONS

The first year that kindergarten attendance became mandatory for the State of South Carolina was 1984-85. Since that time, the percentage of public first grade pupils having attended public kindergarten programs ranged between 73% and 81%.

Private schools were once the primary source of kindergarten training. However, the percentage of the first grade pupils having attended public kindergarten programs has shown an increasing trend in the past thirteen years. The projected percentages of first grade pupils enrolled in South Carolina public schools expected to have had pre-school training through state-supported public kindergarten programs ranged from 81.0 for 1993-94 to 86.5 for 1998-99. Of course, as is the case now, there will be wide variations among the school districts in the percentage of pupils receiving kindergarten training through public programs.

Details of the procedure are contained in the paper entitled *Working Notes: Statistical Procedures for Membership Projections, 1994 through 1999.*

COMPARISON OF ACTUAL AND PROJECTED PUBLIC SCHOOL MEMBERSHIP

School district membership was projected for the 1992-93 school year in the previous five editions of this publication. Table 12 on page 34 presents the percent errors in the 1992-93 figures for membership projections made in each of the previous five editions. Percent errors are presented for each school district and for the state. The errors are expressed as percent differences between actual and projected memberships from one year ahead to five years ahead.

To obtain an idea of the error to expect for a school district, both Table 3a and table 12 should be inspected. The average percent error for school districts by membership-size category is presented in Table 3a below.

TABLE 3a

AVERAGE ERRORS

District Membership Size Grades K-12	Number of Districts	Mean Absolute Percent Error Between Actual and Projected Membership: One Year Ahead	Two Years Ahead	Three Years Ahead	Four Years Ahead	Five Years Ahead
20,000 And Above	6	0.7	1.7	2.3	3.6	5.3
10,000 - 19,999	12	1.1	1.3	2.2	2.4	4.0
5,000 - 9,999	20	1.2	1.4	1.7	2.3	2.5
2,500 - 4,999	22	1.5	1.9	3.1	3.8	4.3
1,500 - 2,499	12	1.9	2.6	1.7	4.0	4.3
Below 1,500	19	2.5	5.3	5.8	5.3	9.2

The error averaged less than one percent for projections made one year ago in the six largest school districts. However, the average error made one year ago in projecting membership in the nineteen smallest districts was 2.5 percent. The average percent error generally increases as the number of years ahead increases.

For projections four and five years ahead, the districts in the size range of 5,000-9,999 had average errors less than those of the other categories. The error for the state (See Table 12, page 35) was less than one percent for projections made between one and five years ahead.

STUDENT COUNTS AT SELECTED INTERVALS FROM BIRTH TO COLLEGE ENTRANCE

State estimates of basic statistics that are relevant to educational planning in South Carolina are provided in Table 3b on page 15. Actual and projected counts are included for the first, eighth and twelfth grades in addition to actual and projected counts of high school completers and completers who enter a college degree program. All projected grade counts are based on average daily membership. Projections are located below the solid line and actual counts above the solid line.

The historical counts for live births are compiled by place of residence. These counts are taken from the various annual reports of the State Department of Health and Environmental Control. All enrollment and membership data are taken from the official student counts collected by the Office of Finance and summarized by Education Information Services, both within the State Department of Education. The counts for high school completers and completers entering college are taken from the *Annual Report of the State Superintendent of Education*, 1982-83 through

1991-92 and the compiled data for the 1992-93 report. The numbers of high school completers entering college in the Fall are identified in the source documents as students entering junior or senior colleges or degree programs in technical education colleges.

Projections of high school completers are based on the completion rate of the most recent year available. Current efforts to reduce dropouts may result in higher completion rates than those projected. Projections of the numbers of high school completers entering college are based on the college entrance rate of the most recent year available. Because less than one year elapses between completion and entering college, the percent of high school completers entering college is affected more by economic trends and alternatives to junior and senior colleges than by migration. Projected high school completers and completers entering college were rounded to hundreds.

As can be gleaned from Table 3b on the opposite page, South Carolina's live birth count increased from 46,665 in 1975 to 58,461 in 1990. The birth count dropped to 57,517 in 1991 and dropped again to 56,102 in 1992.

The first grade of 1992-93 with 54,541 pupils was 948 smaller than the first grade of 1991-92. Over the years, the number of first graders has fluctuated. However, during the period from 1981-82 through 1988-89, the number of first grade pupils steadily increased from 47,148 to 56,843. The 1988-89 count was, in fact, the largest since 1970-71 when 62,152 first graders were reported. Most of the increases can be attributed to the rise in live births. Recent trends in tightening promotion standards in South Carolina probably have affected the size of

1991	57,517	1997-98	59,600	103.62											
1992	56,102	1998-99	57,900	103.20											

a) The above counts exclude students within Felton Laboratory School, South Carolina School for the Deaf and Blind, Palmetto Unified School District, and South Carolina Department of Juvenile Justice. Student counts may differ slightly from cited source documents due to the inclusion of data from school reports that were received after the sources were published. Completers include diploma and certificate recipients.

b) Counts include only the students who entered college in the fall of the year immediately following the school year in which high school completion occurred.

c) Counts by grade will differ slightly from that shown within the source documents cited in the "Bibliography" due to the distribution of students within ungraded classes and self-contained special education classes into appropriate grades.

d) Student counts prior to the 1978-79 school year were taken from the 180-Day Enrollment Collection (official count); student counts thereafter were taken from the 135-Day Average Daily Membership Collection (official count). All projected figures, however, are based on Average Daily Membership.

e) The above completion rates (% high school completers) do not reflect current efforts to reduce dropouts. Some of the displayed rates for future years are partially based on factors that already have occurred. Any substantial improvement in the rates will be due to current programs, the impact of which cannot yet fully be determined.

BEST COPY AVAILABLE

the first grade as well. Under current local policies, students not meeting curriculum standards would be required to repeat the first grade.

The eighth grade membership in South Carolina in the late 1970's was less than 96 percent of the first grade membership seven years earlier. Then, throughout the 1980's, the eighth grade membership was within 2.5 percentage points of the first grade seven years earlier. But, in 1990 the eighth grade membership again fell below 96 percent of the corresponding first grade membership. By 1992-93, the eighth grade count had dropped to about 92% of the seven-year-ago first grade count.

In 1982, approximately sixty-two percent of the state's first grade students of 1970-71 completed high school after eleven years. In 1992, approximately sixty-eight percent of the first grade students of 1980-81 completed high school. The percent of the eighth grade completing high school four years later has been about seventy percent for the past ten years and is expected to remain at about 70% for the classes of 1992 through 1998.

The completion rate for twelfth graders was less than ninety-three percent in 1981-82 and was over ninety-five percent in 1991-92. Expectations are that this rate will remain just above ninety-five percent through 1999. With fifty-five percent of high school completers of 1992 entering college the following Fall, the previous record in the rate for completers entering college was exceeded for the seventh consecutive time.
